SUMMARY

As a Computer Engineering student, I combine strong academics with hands-on project experience in full-stack development using Java, HTML/CSS, JavaScript, React, Node.js, and MySQL. I also have growing expertise in AI/ML, including data preprocessing, model training, and automation. I'm adaptable, collaborative, and have strengthened my teamwork through leadership roles. My creativity in art and design helps me bring innovative and user-focused solutions to every project.

WORK EXPERIENCE

RGIT CESS

Andheri, India

Marketing team member

07/2024 - 07/2025

- Coordinated with external companies and organizations to arrange technical workshops and seminars.
- Handled professional communication via email and calls for sponsorships and collaborations.

Artificial Intelligence Intern - My Job Grow

- Assisted in developing and testing AI/ML models through data cleaning, feature extraction, and performance evaluation.
- Worked with the engineering team to integrate ML outputs into web applications, enhancing automation and decision-making.

EDUCATION

Rajiv Gandhi Institute of Technology, Mumbai University

Andheri, Maharashtra

- B.E in Computer Engineering (CGPA 8.25)

08/2023 - 06/2027

Chhatrapati Shivaji Junior College of Arts, Science & Commerce

Solapur, Maharashtra

- 12th HSC

08/2021 - 02/2023

Saint Thomas English Medium School

Solapur, Maharashtra

- 10th ICSE, Percentage: 86.42%

05/2009 - 04/2021

PROJECTS

Car Rental System

- Developed a Car Rental System in Java using OOP concepts for vehicle management, customer bookings, and automated invoices.
- Used ArrayLists and dynamic data structures to manage real-time updates for vehicles, customers, and rentals.

Deep Fake Detection

- Built a DeepFake Detection model using ResNet-18 with transfer learning for real/fake face classification.
- Applied Python libraries (PyTorch, OpenCV, NumPy, Pandas) for data preprocessing, training, and visualization.
- Used MySQL to store model metadata, dataset paths, and performance logs.

MEDSTOCK-MEDICAL INVENTORY MANAGEMENT

- Built a full-stack Medical Inventory Management System using React.js, Node.js, and MySQL with secure role-based access control.
 - Implemented real-time stock tracking, low-stock/expiry alerts, and streamlined inventory updates.
 - Designed a user-friendly dashboard to simplify monitoring and support faster decision-making.
-

Skills

Skills: C, C++, Java, Python, JavaScript, HTML5, CSS3, React.js, Tailwind CSS, Bootstrap, Node.js, MySQL, SQL, MongoDB, PyTorch, NumPy, Pandas, OpenCV, Matplotlib, Scikit-learn, GitHub, VS Code.

Achievements

- **Participated in the Frontend Arena Hackathon at SPIT, collaborating to build a fully responsive and user-friendly web application.**
 - **Utilized modern frontend tools and technologies such as React.js, Tailwind CSS, JavaScript, and responsive UI design principles to deliver a polished interface under time constraints.**
-
